

# Derivative Function Worksheet

1. Mark the  $x$ -values where  $f'(x) = 0$  in **Fig 1**.
2. Mark the  $x$ -values where  $f'(x) > 0$  in **Fig 1**.
3. Mark the  $x$ -values where  $g$  is maximum in **Fig 2**.
4. Mark the intervals where  $g$  is increasing in **Fig 2**.
5. Sketch the graph of  $f'(x)$  on the same axes in **Fig 1**.
6. Sketch the graph of  $g(x)$  on the same axes in **Fig 2**.
7. Find the slope of the tangent to  $f(x) = 3x^3 + 3$  at  $x = -2$ .
8. Use the answer from (7) to find the equation of the tangent line to  $f(x) = 3x^3 - 3$  at  $x = -2$ .
9. If  $g'(x) = \frac{1}{x^2 - 5x + 6}$ , find the points where  $g(x)$  is not differentiable.
10. Write the necessary condition for  $y = \frac{f'(a)}{a}x$  to be a tangent line to  $f(x)$  at  $x = a$ .
