## 7.G.5: Worksheet <br> Solutions

1. Write an equation for an angle $x$ that's supplementary to a $47^{\circ}$ angle. What is $x ? x+47=180$, so $x=133$
2. Write an equation for two angles, $x$ and $y$, that are complementary. $x+y=90$
3. A pair of adjacent angles form a $126^{\circ}$ angle together. If one of them is $66^{\circ}$, set up and solve an equation to find the other. $x+66=126$, so $x=60$
4. What angle is complementary to $30.5^{\circ}$ ? $59.5^{\circ}$
5. What angle is supplementary to $174.2^{\circ}$ ? $5.8^{\circ}$

Use the following figure to answer questions 6-8.

Figure 1.
6. Write and solve an equation to find angle $x .46+$ $x+74=180$, so $x=60$
7. What is the measure of angle $y$ ? $74^{\circ}$
8. What is the measure of angle $z ? 60^{\circ}$

Use the following figure to answer questions 9-10.

Figure 2.
9. What's the measure of angle $a$ ? $59^{\circ}$
10. What's the measure of angle $b$ ? $149^{\circ}$
