## Trigonometry Worksheet 8 <br> 

Refer to Figure 1 to complete the questions 1-6 to prove the Law of Sines.

1. Find $\sin \alpha$.
2. In a triangle where the side opposite a $104^{\circ}$ angle has length 5, find the length of the side opposite a $42^{\circ}$ angle.
3. Find $\sin \beta$.
4. An angle of $65^{\circ}$ is contained in between two sides of lengths 12 and 14 . What is the side opposite the $65^{\circ}$ angle?
5. Solve for $x$ in terms of $\beta$.
6. Solve for $x$ in terms of $\alpha$.
7. Prove the Law of Sines.
8. In a triangle, side $x$ is opposite a $23^{\circ}$ angle and a side length of 17 is opposite a $38^{\circ}$ angle. What is the value of $x$ ?
9. In a triangle with adjacent sides of length 10 and 22, and the included angle measuring $17^{\circ}$, find the length of the third side.
